TNT Request for Rated Transit Times

Thank you for your enquiry for TNT's Rated Transit Times (RTT). Please find attached a copy of the latest technical specification document for RTT.

RTT is an XML based system providing pricing and transit time data based on your own TNT rates.

Briefly the process is your system sends an XML request to TNT's server which includes the mandatory details for a quote. TNT will reply with an XML response with all valid TNT services for the origin/destination; using the items / weight / dimensions of the request, and each service's transit times.

Weblinking Documentation for Consignment Tracking

Please find attached documentation on integrating TNT's tracking services into your intranet/website or as an embedded link request within the body of an email, using both Consignment or Senders Reference fields.

Secured Weblinking Credentials:

Username: AERISuser

Password: prlSwL6H

Here are the new credentials for our UAT environment for domestic shipments.

UAT Credentials:

Username: CIT000000000000134449

Password: 88TZ7BCAxx

Account: 30023444 (for test environment only)
